

Protect People with Special Needs from the Dangers of Being Left Unattended in a HOT Vehicle

- Justice Center Infographic -

Heatstroke can lead to severe injury or death. Children, elderly adults and people who are overweight or who have a chronic medical condition are at higher risk of becoming overheated.

In just **10 minutes**, a vehicle can reach deadly temperatures on an 80 degree day.

When the temperature outside is in the **60's**, a vehicle's temperature can climb to above **110 degrees**. Heatstroke can occur if your body temperature rises to **104 degrees**.

Cracking a window **will not** keep a vehicle cool.

TIPS

(NHTSA - 2012)

- **Never** leave a person unattended in a vehicle.
- **Always "look before you leave"** to make sure no one has been left behind.
- **Call 911** if you see a person alone in a vehicle.
- **Contact** the Justice Center at Infoassistance@justicecenter.ny.gov if you have questions.
